<p>In-house built 785 nm inverted Raman microscope unit</p>	<p>N/A</p>	<p>N/A</p>	<p>An inverted Raman microscope is best for proper focusing onto surface of the well plate. Otherwise a very low magnification will be used due to height of the 96-well plate. An in-house built system was used as it was cheaper than buying from a vendor. However, any commercially available inverted Raman microscope system can be used.</p>
